

Based in Burgbernheim, ALLOD sees itself as development partner for customised thermoplastic compounds for the plastics industry. Our core business is developing, producing and distributing thermoplastic elastomers (TPE).

For the upcoming educational year starting in September 2019 we are offering an apprenticeship as

Process Mechanic (m/f/d) Plastic and Rubber

During this three year apprenticeship you get to know different types of plastics, their properties and how to process them with our machines. The curricula contains among other things

- how to prepare, set up, and operate our machines, so called extruders,
- how to supply them with raw materials,
- how to supervise the machines during production and how to deal with interruptions and break-downs,
- how to perform product changes,
- how to service and maintain our machines,
- how to supervise the quality of the finished goods, and
- how to do production and staff planning.

Additionally, we offer courses such as a forklift license, an external seminar where you learn different communication and presentation skills as well as personality development, and the opportunity to get to know another company of the plastics industry for a period of four weeks.

What we expect from you:

- Reliability
- Willingness to learn new things
- You have successfully completed your school education

What we offer:

- an innovative and dynamic environment in a growing enterprise
- a position with varied tasks and good potential for development
- demanding activities

We are looking forward to receiving your application representing your skills and experience.
